Heterocycles as physiological ligands for the benzodiazepine receptor and for other binding sites

Georg-August-univ., inst. biochemie, Goettingen 3400, Federal Republic of Germany

Journal: Pharmacological research, 1989, 21 (6) 673-682 Language: English

All the benzodiazepines used in *therapy* show a similar *chemical* structure. However, *depending* on particular substituents, agonistic benzodiazepines can be subdivided into groups of different *pharmacological* potency. Besides benzodiazepines, in the past years other *alkaloid* drugs, e.g. derivatives of morphine, norharmane and tetrahydronorharmane, have been isolated from animals. Some of these substances have been discussed as physiological ligands of specific neuronal binding sites

Alcohol *dependency* and *abuse* *treatment* - comprises administering *ibogaine* and/or its non-toxic salts Patent Assignee: (NDAI-) NDA INT INC Author (Inventor): LOTSOF H S

Patent Family:

8941 (Basic) CC Number Kind Date Week
US 4857523 A 890815 8941 (Base
Priority Data (CC No Date): US 221030 (880718)
Abstract (Basic): US 4857523

Treating *alcohol* *dependency* and *abuse* comprises internally adminstering a dosage of 4-25 mg/kg of *ibogaine* and/or its *therapeutically* active cpd.

The dosage is administered orally and the *compsn*. contains *ibogaine* and/or its hydro chloride or hydrobromide in a dosage of 400-1000 mg. The dosage is pref. in capsule, tablet, pill, powder or soln. form and is admixed with binders or fillers. A plurality of dosages are administered, intervals of a number of days intervening between successive dosages. A single *treatment* is effective for about

	(Basic)												1)		583520 (840224)	Abstract (Basic): The use of the nonapeptide (I) or its physiologically	wal* symptoms from *drug*		(I).	Particularly (I) is used to *treat* withdrawal from opiates (morphine or heroin) or from alcohol. It is administered intravenously	or subcutaneously at a dose (for a 75 kg subject) of 1 mg, one or more		A pref. soln. for injection comprises 1 mg (I); 1 mg	to 1 ml. The (II)		deg.C, then the soln. cooled and (I) and NaCl added. The soln. was made	up to volume with water, sterile-filtered and tilled into ampoules			hypnotic. When tested in rats and dogs at doses 50 times greater than	those intended for human use, (I) caused no adverse changes to	to	electrocardiograms or to the histology of internal organs.
